OBDII *BLOCKER*

Thieves don't need your keys anymore. They just need your OBD2 port.

Lock it down with the PE OBDII BLOCKER.

Thieves can plug a key programmer into an exposed OBD2 port and program a new key fob in minutes. The OBDII BLOCKER locks the port to stop them.

System Features

- Bluetooth enabled; lock and unlock the OBD2 port from the mobile app
- Installs behind the dash, between the dash and the existing OBD2 port
- Standard OBD2 connector, so it isn't obvious a blocker is in place
- Helps keep thieves from programming a new key through the port
- Free mobile app; no subscription necessary

What Sets Ours Apart

- Blocker still reads the CAN bus without sharing data at the port
- Configure the blocker in the app to lock and unlock the port automatically based on CAN data, such as when a certain RPM is reached; no need to remember to lock or unlock it
- Includes 12V accessory port which powers on aftermarket accessories from key-on power instead of always-on power
- No more unplugging the radar detector, backup camera and other accessories to keep from draining the battery
- Switch accessories on and off with key-on power AND engine parameters from the CAN bus, making additional electronics like TPS switches or window switches unnecessary
